

Rayburn XT

During 2005 a new generation of Rayburn cookers was born with the introduction of the XT Cookmaster series.

Based on the popular 400 Cookmaster, its striking 'retro feel' styling uses chrome trims, sleek insulating covers and stretched thermoidal, together with ergonomically designed chrome door handles, to create a new contemporary look.

It features the largest ever Rayburn hotplate and has two separate cast iron ovens.

Models are available suitable for either Natural gas or LPG gas using a pre-mix burner. A Kerosene oil model utilises a pressure-jet burner.

All models operate only on a fan-assisted, power flue system.

Minor restyling of the doors and the lower plinth occurred in 2007 later models having a plinth covering the entire width of the front

Production continues.
