

The Rayburn Electric Models

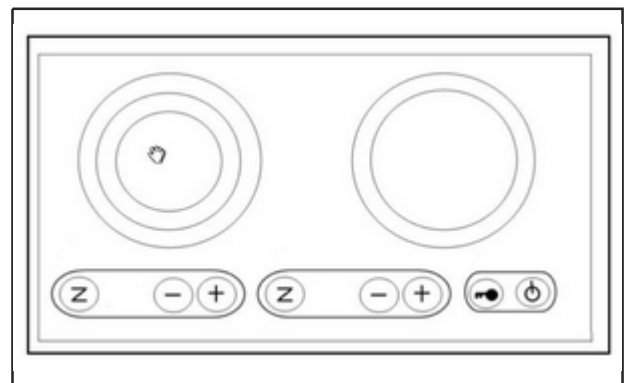

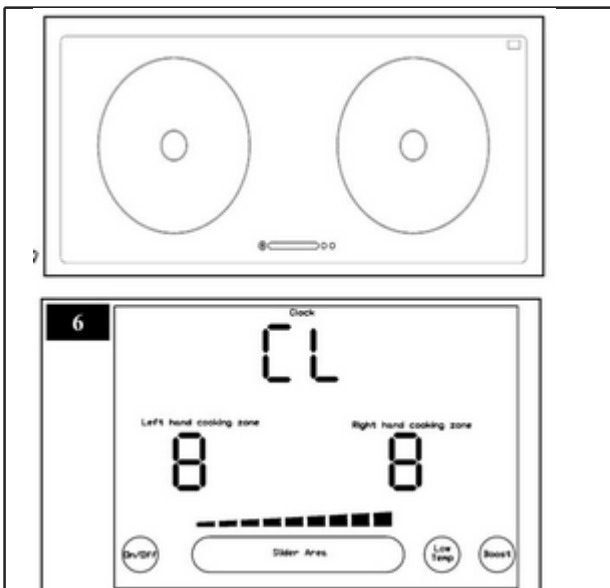

Control panel

Rayburn Electric

Induction hotplates

Ceramic hotplates

Aga Rangemaster acquired the Redfyre brand in 2011 and during December introduced an all-electric Rayburn cooker based on this popular design.

It consists of a multifunctional fan top oven and grill, together with a lower conventional oven fitted with two heating elements, the top one of which can be individually selected for browning.

The hotplate has two cooking zones.

These can be either Induction hobs or Ceramic elements. Round polished lids are fitted as standard with the option of rectangular Rayburn style lids if preferred.

Controls are fitted behind the lower left-hand door with an external indicator panel above the top oven door.

A unique feature is the 'warm-front' option, allowing a small heater to warm the front and top-plates, in the manner of a cast-iron range cooker

During 2013 the Induction hob option was upgraded with increased efficiency and now provides an additional 'boost' feature.

Production continues
